DocuLynx, Inc. Receives an “Innovator of the Year” Award at Xplor

Mercury Web Software’s Extensive Capabilities Recognized by Xplor International

March 9, 2009— www.doculynxinc.com—DocuLynx, Inc., a leading provider of archive, retrieval, electronic distribution, and web presentment solutions for print service providers, today announced that its Mercury Web Presentment software earned an award in Xplor International’s “Innovator of the Year” competition. DocuLynx was one of only three companies recognized by this prestigious organization for the development of a software solution that has notably impacted the print service provider industry in 2008. The award was presented to DocuLynx on March 5, 2009 during the annual Xplor Global Conference and Exhibition, held at St. Petersburg, Florida, March 4 - 6.

DocuLynx’ innovative Mercury Web technology was developed to provide a scalable, secure, and distributed environment for electronic document storage, delivery, and true fidelity viewing over the Web. Members of the Xplor Awards Committee were impressed by the benefits Mercury Web delivers, which include the ability to ingest and store documents in multiple formats; sub-second search times for even the largest databases; flexible, customizable document retention and storage utilization; and extensive audit logging to track all the events that may occur on the Mercury Web server.

Mercury Web is unique because it offers a standard “out of the box” interface that can be implemented in minutes, but also provides open interfaces, APIs, and a comprehensive toolkit for easy integration within an enterprise’s existing infrastructure.

“We found DocuLynx’ Mercury Web software to be an elegant, user-friendly platform that sets new benchmarks for performance in storage, accessibility, security, and ease of use across multiple document repositories and file formats,” said Skip Henk, president and CEO of Xplor International.

“As a company, our mission is to continue developing solutions that make the archival and retrieval of high-volume documents easier and more flexible,” said Terry Wiczorek, president and CEO of DocuLynx. “We’re proud of the recognition we received from Xplor International for Mercury Web Presentment because this software truly offers the Xplor community a solution that will transform the way information can be made available over the Internet or a company’s Intranet by simply using a standard Web browser.”

About DocuLynx, Inc.

DocuLynx, Inc. is an information technology company whose mission is to help its customers to manage and add value to high volume computer output print streams. Focused on print and mail specialty service bureaus, DocuLynx offers organizations in this industry efficient, cost-effective ways to satisfy the requirements of their clients and ensure regulatory compliancy. DocuLynx also provides professional and systems integration services to assist organizations in the adoption of these technologies and ease the transition.
